First-in-man evaluation of the novel balloon delivery system STENTYS Xposition S for the self-apposing coronary artery stent: impact on longitudinal geographic miss during stenting.
_EuroIntervention_ 2016; 11: 1341-1345

Procedural outcomes of patients with calcified lesions treated with bioresorbable vascular scaffolds
_EuroIntervention_ 2016; 11: 1355-1362

Co-registration and fusion of intracoronary imaging with angiography.
Part IV, Chapter 37: Coronary stenosis imaging, structure and physiology (2nd Edition).
J Escaned and PW Serruys (Eds).

Very high pressure dilatation for undilatable coronary lesions: indications and results with a new dedicated balloon.

Myocardial blush and microvascular reperfusion following manual thrombectomy during percutaneous coronary intervention for ST elevation myocardial infarction: insights from the TOTAL Study.

Significance of prior percutaneous revascularization in patients with acute coronary syndromes: insights from the prospective PROSPECT registry.

Can “True Bifurcation Lesion” actually be regarded as an independent risk factor of acute side branch occlusion after main vessel stenting? A retrospective analysis of 1200 consecutive bifurcation lesions in a single center.
*Cath Cardiovasc Interventions* 2016; 87: 554-563

Six-month outcomes of the XINSORB bioresorbable sirolimus-eluting scaffold in treating single de novo lesions in human coronary artery.
*Cath Cardiovasc Interventions* 2016; 87: 630-637

642. **Zhang M, Sara JDS, Matsuzawa Y, Gharib H, Bell MR, Gulati R, Lerman LO, Lerman A.**
Clinical outcomes of patients with hypothyroidism undergoing percutaneous coronary intervention.
*Eur Heart J* 2016; 37: 2055-2065

Culprit plaque morphology in STEMI-an optical coherence tomography study: insights from the TOTAL-OCT Substudy.
*EuroIntervention* 2016; 12: 716-723

Clinical and multimodality imaging results at 6 months of a bioresorbable sirolimus-eluting scaffold for patients with single de novo coronary artery lesions: the NeoVas first-in-man trial.
